Acknowledgements

I want to thank our mentors in this internship (Miss Pratibha & Miss Smita) for helping us develop an app even for those who are inexperienced. I would also like to thank my parents for signing me up for this internship to achieve my dream of becoming a software engineer and Mr Ken for taking the time to review our apps and give suggestions.
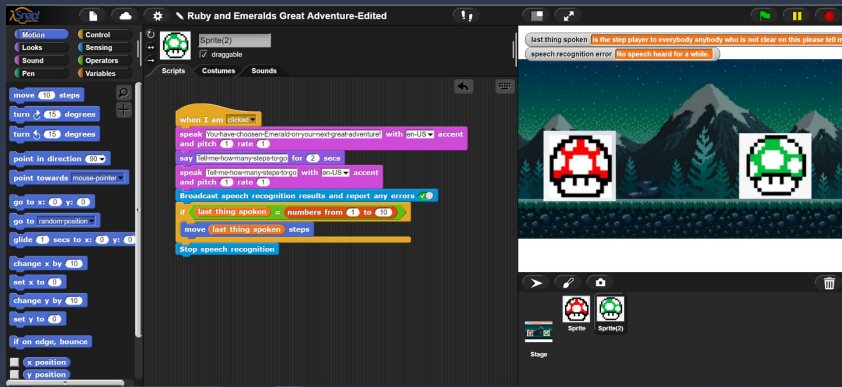

About me

My name is Maryam Noor and I'm currently 13 years old. I study in grade 9 so I'm a freshman. I was born on October 25th 2007 in Pakistan. I want to study in Canada in computer science. I've also joined a computer club at school.

About my Internship with Clevered

This internship has been teaching me a lot. I didn't know block coding would just as fun as text coding like I usually do. I've completed quite a few AI Wizard levels and I've learned lots from them, they're the source of my coding skills today.
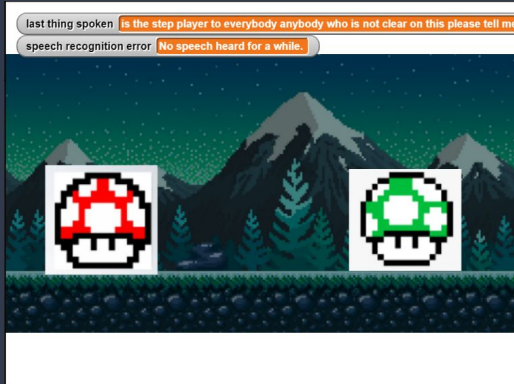

About App

In the main menu, the narrator will welcome you to the game and then ask which character you want to play with. Those characters are Ruby or Emerald. After choosing one you can use speech recognition to move around and go to places in the town I call "Rodeia". Places such as taverns, houses, neighborhoods.

How to use the app?

Simple, through speech recognition. You can say right or left to move and explore.

Option Name

When the narrator asks you which character you want to choose, say the name of the character you want and you'll be switched to the characters point of view. For exploration, say "right" or "left" as it is a mario type point of view. In order for the command to work you must say it in a very clear voice into the microphone of your headset.
